

CHAITANYA TYAGI

Senior Software & Platform Engineer | Full-Stack, Distributed Systems & Web3

Bengaluru, India • (+91) 7292022169 • chaitanya.tya@gmail.com • linkedin.com/in/chait-tyagi

PROFESSIONAL SUMMARY

Senior Software Engineer with **6+ years of experience** architecting high-throughput distributed backends, crypto/Web3 financial protocols, scalable cloud platforms, and modern web applications. Expert in designing secure transaction processing and digital payments infrastructure, hardline microservice security, and full-lifecycle infrastructure automation across multi-cloud environments (AWS/GCP). Proven history of slashing latency, preventing downtime, and reducing cloud infrastructure expenditure while delivering resilient user-facing products.

TECHNICAL SKILLS

Languages & Frameworks: Golang, Python 3, Java, TypeScript, JavaScript, SQL, HTML5, CSS3

Frontend & User Interface: React.js, Next.js, Web3 Wallet Integration, Tailwind CSS, State Management (Redux/Zustand)

Web3, Fintech & Security: Crypto Payment Gateways, Key Management, Digital Signatures, Kong API Gateway, Auth0, Okta, SOC2 Compliance

Cloud Infrastructure & DevOps: AWS, GCP, Kubernetes (EKS/GKE), Terraform, Pulumi, Docker, Helm, Jenkins, CI/CD, Ansible

Distributed Systems & Storage: PostgreSQL, Redis, Apache Kafka, MySQL, DynamoDB, Snowflake, RESTful APIs, Microservices, gRPC

Observability & Systems: Prometheus, Grafana, Datadog, Linux Internals, Network Security, Disaster Recovery, SLOs/SLAs

PROFESSIONAL EXPERIENCE

Senior Software Engineer – Web3 & Infra | Decentralized Finance / Crypto Platform

01/2025 – Present

- Architected secure cryptocurrency payment processing pipelines and high-throughput transaction routing engines, incorporating non-custodial wallet signatures and cryptographic validation to eliminate replay vulnerabilities.
- Designed and maintained high-availability multi-region cloud infrastructure using Kubernetes, Docker, and Terraform on AWS, maintaining 99.99% uptime for core settlement and node synchronization systems.
- Built responsive, accessible web user interfaces using React.js, TypeScript, and Tailwind CSS, interfacing directly with Web3 provider APIs, smart contracts, and real-time transaction tracking WebSockets.
- Implemented enterprise-grade security protocols, integrating automated vulnerability scanning, strict role-based access control (RBAC), and secrets management (KMS/Vault) to ensure compliance with financial and digital asset standards.
- Optimized data ingestion and ledger caching layers using Redis and Kafka, lowering checkout payment verification latency by 45%.

Senior Software Engineer | Amagi Media Labs

10/2023 – 01/2025

- Spearheaded the development of a standardized deployment framework across the product suite, cutting release configuration errors by 70% and accelerating production rollout cadence.
- Engineered an automated disaster recovery solution for the Universal Access and Identity Management system with multi-region failover, successfully achieving 99.99% uptime and defining rigid SLAs/SLOs.
- Enhanced cloud infrastructure reliability and security by executing proactive patch automation, centralized logging, and real-time monitoring, decreasing production security incidents by 50%.

Software Engineer | Amagi Media Labs

11/2022 – 10/2023

- Led architectural overhaul of an API-centric authentication and authorization gateway, driving a 75% efficiency gain in Identity Management workflows via centralized Kong Gateway enforcement.
- Automated enterprise access management policies and security best practices (Okta/Auth0 integration), fortifying boundary isolation and mitigating unauthorized data access vectors.
- Operated and scaled multi-tenant Kubernetes clusters across clouds, developing custom operators and auto-scaling rules to maintain optimal low-latency throughput under peak traffic surges.

Software Engineer | CommerceIQ

05/2021 – 11/2022

- Redesigned client database provisioning using parallelized SQL dump pipelines, reducing onboarding database initialization time by 75% (from 6 hours to 30 minutes).
- Engineered an AWS-based machine learning data pipeline featuring automated error management and dynamic input routing, accelerating end-to-end data processing efficiency by 50%.
- Automated SOC2 compliance auditing through compliance-as-code frameworks, optimizing AWS cloud utilization to generate \$100,000 in annual cost savings (40% spend reduction).

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional
- Certified Kubernetes Application Developer (CKAD)
- Google Cloud Professional Cloud Developer
- AWS Certified Data Analytics – Specialty

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science & Engineering • Birla Institute of Technology, Mesra, Ranchi •
CGPA: 7.9
